A call for egalitarian distribution of wealth and power to safeguard the environment and address climate change.

'In accessible and pithy, bite-size essays, Boyce shows how the inequality in wealth and power is both a cause and consequence of environmental degradation and social injustice. A great read for experts and a new generation alike.'

—Kevin P. Gallagher, Professor of Global Development Policy, and Director, Global Development Policy Center, Frederick S. Pardee School of Global Studies, Boston University, USA

'In this elegantly written, carefully crafted, deeply personal and every bit policy-relevant volume, James Boyce adds essential new chapters on climate change, sustainable growth, universal income and, yes, the last passenger pigeon. Indispensable and delightful read for anyone interested in economics for the twenty-first century.'

—Éloi Laurent, Economist, Sciences Po, France, and Stanford University, USA

'Starting from first principles Boyce offers a range of essays that inform, challenge and inspire. Highly readable, thoroughly engaging and always policy relevant, this is a delightful and compelling addition to the literature on climate change, environmental justice and global sustainability.'

—Manuel Pastor, Professor, Sociology / American Studies & Ethnicity, Turpanjian Chair in Civil Society and Social Change, University of Southern California, USA

'Economics for People and the Planet' challenges the myth that economic growth must come at the expense of the natural environment and advances our understanding of how a more egalitarian distribution of wealth and power can help to safeguard the environment and address climate change.

About the Author(s) / Editor(s)

James K. Boyce is a senior fellow at the Political Economy Research Institute and professor emeritus of economics, University of Massachusetts Amherst, USA. His previous books include *Economics, the Environment, and Our Common Wealth* (2013), *Reclaiming Nature* (2007), *Natural Assets* (2003) and *The Political Economy of the Environment* (2002).
